

## **LAB – 1**

**Aim:** Identify project and write the project definition for the same.

### **Restaurant Recruitment System**

- **Definition:**

- A project restaurant recruitment system is a web application or system for those who want to apply for the restaurant staff as a chef, manager or waiter at a restaurant.

- **Abstract:**

- This project is aimed at developing a web-based recruitment process system for those who want to apply for job at restaurant. User can reach to this recruitment platform through advertisement. To apply for the jobs, user must fill up some general information given in form for their identification and they can be categorized in different job roles.
- For different job roles, there are different forms. User can convey their requirements to restaurant. There are also some other features provided to users such as it can download application form, it can contact for enquiry. All the data or information of system is handled by admin. Hence the goal is to design the system where the users can apply for restaurant job from anywhere.

- **Key Features:**

- Easy to use
- Easy to maintain
- Fulfilling user requirement
- Reporting capabilities
- Support
